

James Park

Junior Frontend Developer | React | Next.js | TypeScript | Tailwind CSS

jamespa001@gmail.com | 206-334-8216 | Tampa, FL, USA | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Summary

Junior Frontend Developer building and deploying responsive web applications in React, Next.js, TypeScript and Tailwind CSS, including a server-rendered AI skincare application shipped as a Frontend Engineering Intern at Skinstric AI. Moving into frontend product development from close to 3 years of C#, WPF and PowerShell automation and engineering tooling at Wipro on a Microsoft vendor engagement, where a rewritten OS deployment workflow cut run time from 1.5 hours to about 15 minutes. Comfortable with REST APIs, Firebase, Stripe, Vercel deployments and pull-request workflows.

Technical Skills

Languages & Web: JavaScript (ES6+), TypeScript, HTML5, CSS3, Semantic HTML, C#

Frameworks & Libraries: React, Next.js (App Router), Redux Toolkit, Tailwind CSS, Styled Components, AOS

Backend & APIs: REST APIs (fetch / axios), Node.js, Express, Firebase Auth, Cloud Firestore, PostgreSQL, Stripe Checkout

Tools & Platforms: Git, GitHub, Vite, npm, Vercel, Docker, Google Cloud Run, Google Artifact Registry

Frontend Specialisms: Responsive and mobile-first design, skeleton loading states, UI animation, client-side state management

Experience

Skinstric AI (Remote)

Aug 2026 - Present

Frontend Engineering Intern

- Built and deployed a server-rendered AI skincare consultation app with Next.js App Router, Tailwind CSS and Cloud Firestore, featuring multi-step diagnostic forms, custom SVG visualisations and persistent user data.
- Developed dynamic UI modules, skeleton loaders and AOS entrance animations, and integrated third-party REST APIs across responsive desktop and mobile viewports.
- Managed Git feature branches and a pull-request workflow with code review to streamline collaboration and deployment.

Wipro (Redmond, WA)

Feb 2022 - Oct 2024

Senior Project Engineer (Wipro vendor engagement supporting Microsoft)

- Rewrote Windows OS deployment automation in C#, WPF and PowerShell, cutting run time from 1.5 hours to about 15 minutes.
- Built internal engineering tools from scratch (BCD Tool, Execution Manager, Auto Scheduler, BVT Tracker) and received the 2023 Eureka Innovation award for contributions to team automation.

Projects

Ticketmaster Platform Clone | [Live Demo](#) | [GitHub](#)

- Next.js, TypeScript and Tailwind CSS: real-time event search through the Ticketmaster Discovery API, Firebase authentication, Stripe checkout sessions and a user dashboard, deployed on Vercel.

NFT Marketplace | [Live Demo](#) | [GitHub](#)

- React, Tailwind CSS and AOS: marketplace components, skeleton loading states, entrance animations and dynamic filters.

Movie Browser Application | [Live Demo](#) | [GitHub](#)

- React, Redux Toolkit and the OMDb API: movie search, detail views and global state managed with Redux Toolkit slices.

Education

Frontend Simplified

2026 - Present

Full-Stack & Frontend Engineering Training (React, Next.js, TypeScript, Node.js, Express, PostgreSQL, Stripe)
